MRI Scan Comparison Report

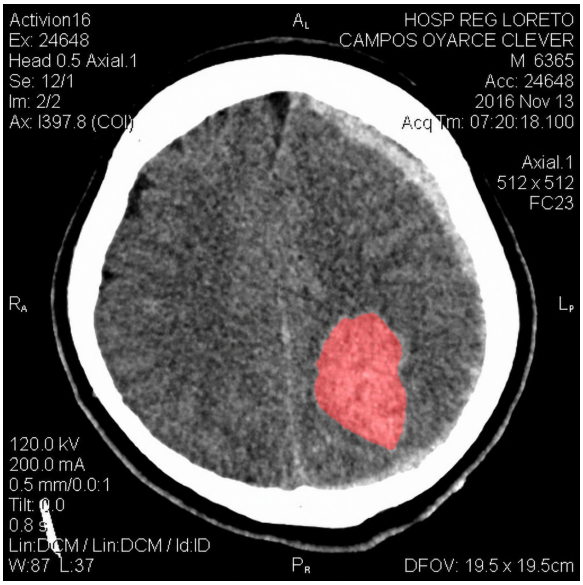

Patient: jj (UID: 405a0dc1-4f90-4dd1-b1cb-0f1c15ecae7c)

Progression Summary

Result: unchanged
Growth/Reduction: 0.0%

Both the previous and current AI scan summaries indicate potential abnormalities consistent with the detected tumor type. While the summaries themselves are identical in their generic statement, the crucial clinical note highlights a significant change in diagnosis. The patient's prior diagnosis was Glioma, but the current scan indicates Meningioma. This represents a change in the nature of the tumor, not necessarily its size or growth, and necessitates a multidisciplinary review to determine the appropriate course of action based on the new diagnostic information.
