Brain Tumor Detection & Monitoring Report

AI Assisted Brain MRI Diagnostic Analysis

Glioma	High	93.0%
Tumor Type	Risk Level	Confidence

Patient Information

Name	jj	**Patient UID**	405a0dc1-4f90-4dd1-b1cb-0f1c15ecae7c
Age	0	**Sex**	Female
Blood Group	A+	**Scan Date**	2026-07-30 11:11:47

Detected Region: Right Frontal Lobe
Severity: Stage IV
Clinical Risk: High

MRI Scan Visualization

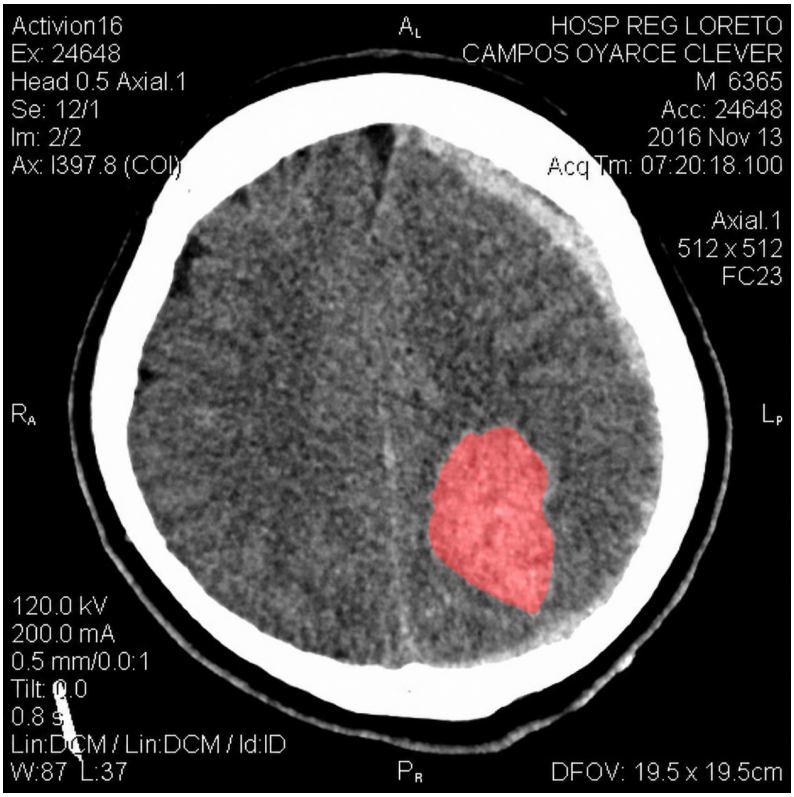

Figure: Highlighted MRI Tumor Detection

Clinical Summary

Tumor Type	Glioma
Tumor Location	Right Frontal Lobe
Risk Level	High
Severity	Stage IV
Detection Probability	93.0%

Detection Confidence

Confidence Score: 93%

AI Findings & Interpretation

This is a sample AI summary generated because GEMINI_SWITCH is set to OFF in the testing phase. The scan indicates potential abnormalities consistent with the detected tumor type.

Clinical Recommendation

This AI-assisted MRI analysis indicates findings that should be clinically correlated with radiological and neurological evaluation. Further diagnostic confirmation and treatment planning should be performed by a licensed healthcare professional.
